Professional Summary

Backend-focused Computer Science undergraduate with 4 months of production software-development experience maintaining an ASP.NET MVC admissions platform. Builds and deploys API-driven systems using Django REST Framework, Node.js, PostgreSQL, Redis, Celery, Docker, secure authentication, and automated testing.

Education

Institute of Engineering & Technology, Sitapur

2023 – 2027

Bachelor of Technology in Computer Science & Engineering

- **Relevant Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Object-Oriented Programming, Software Engineering

Dr. Virendra Swaroop Education Centre

Intermediate (Class XII) – 91%

Florets International School

High School (Class X) – 94%

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C#, HTML/CSS, Bash

Backend: Django, Django REST Framework, Flask, Node.js, Express, Fastify, ASP.NET MVC, REST APIs, JWT, WebSockets, Celery

Databases & Infrastructure: PostgreSQL, SQL Server, Redis, SQLite, MongoDB, Prisma ORM, Docker, IIS

Testing & Tools: pytest, Vitest, Supertest, OpenAPI/Swagger, Git, GitHub, Postman, Linux, Visual Studio

Concepts: API Design, Authentication & Authorization, Database Design, MVC, Clean Architecture, OOP, DSA, CI/CD

Experience

Sitapur Shiksha Sansthan Group of Institutions

Apr 2026 – Jul 2026

Software Development Intern

Sitapur, Uttar Pradesh

- Maintained and enhanced a production ASP.NET MVC admission-management portal used for student-administration workflows.
- Diagnosed production defects by tracing Controller–Repository–SQL execution flows across C#, Razor views, repository classes, and SQL Server stored procedures.
- Implemented end-to-end student search through coordinated updates to MVC controllers, repositories, Razor views, and stored procedures.
- Audited architecture, database behavior, security, and maintainability; authored bug reports, technical documentation, and a modernization roadmap.
- Worked with SQL Server, IIS, Visual Studio, and Git while following production-safe debugging and deployment practices.

Projects

Blogify API | Python, Django REST Framework, PostgreSQL, Redis, Celery, Docker | [GitHub](#) | [Swagger](#)

- Built and deployed a production-ready blogging API with 43 endpoints for authentication, posts, comments and replies, likes, bookmarks, notifications, categories, and tags.
- Implemented custom email authentication, JWT rotation and blacklisting, role-based permissions, PostgreSQL persistence, Redis/Celery workflows, Cloudinary media, OpenAPI documentation, tests, and Docker deployment.

PagePulse | Node.js, Express, Zod, Cheerio, Vitest, Supertest | [GitHub](#) | [Live](#)

- Built and deployed a website-audit service that evaluates 10 SEO, accessibility, and security checks using a weighted 100-point scoring model.
- Added SSRF protection, rate limiting, structured logging, request IDs, TTL/LRU caching, and concurrency control; maintained 285 passing tests across 43 files with over 92% statement coverage.

Reduc.to | TypeScript, React, Fastify, Prisma, PostgreSQL, Redis | [GitHub](#)

- Built a deployable TypeScript monorepo for URL shortening and privacy-aware analytics with secure cookie authentication, link management, public redirects, and click tracking.
- Used React 19, Fastify 5, Prisma 7, PostgreSQL 17, Redis, shared packages, health/readiness endpoints, automated validation, and 94 passing tests.
